## **Active Weather Warnings, Watches and Advisories by County:**

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

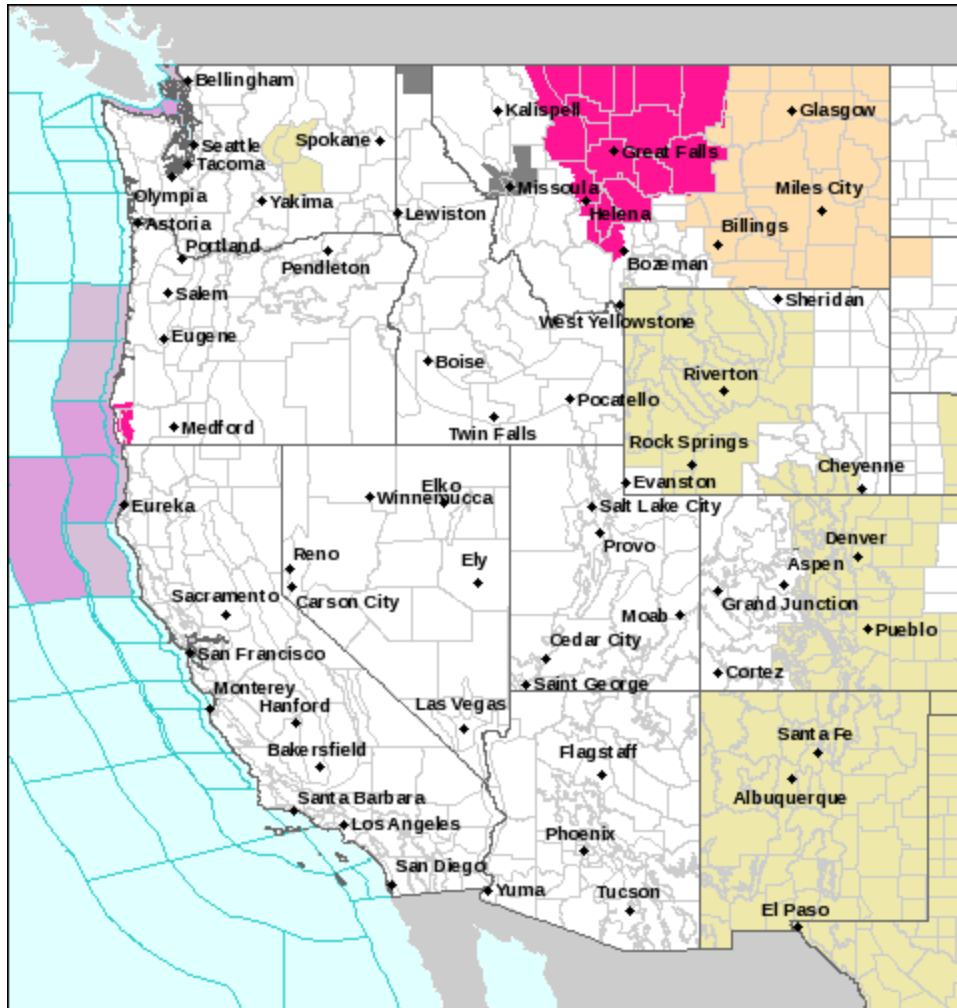

Isolated Thunderstorms possible most afternoons the next 7 days, mainly near Tahoe through Saturday, then becoming more widespread. A relatively dry northerly flow will be over Northern California through Friday as high pressure noses eastward over the region from off the Pacific. However, moisture lingering over the Sierra will continue to foster a small chance of isolated daily afternoon and evening thunderstorms, mainly in the greater Tahoe area, but they could also occur as far north as the Mt. Lassen area. A small and mostly dry trough will arrive over the region this weekend with cooling starting, but slowly. The chance of isolated afternoon and evening thunderstorms will increase for over more of our eastern areas Saturday and again Sunday. A low will cut off from the trough off the central California coast early next week, and moisture is expected to rotate around that into Northern California to spread more moisture and chances of showers or thunderstorms to most of the region Monday then back primarily to the northern and eastern mountains next Tuesday. Winds will generally be quite light this week, but somewhat breezy, gusty northerly winds be over the NW areas at times today then continue with poor overnight RH recovery in the very far NW tonight and Thursday. For the most part, the marine layer will probably stay fairly deep at least south of Cape Mendocino for the next few days. Warmer weather will prevail overall across the Geographic Area through the weekend with the warmest inland areas a bit above normal at 100-105 degrees. Poor air quality near active fires will continue or become somewhat worse, but may improve somewhat this weekend as more wind and instability help increase daily smoke dispersion.

## **SOUTHERN CALIFORNIA**

Expect a gradual reduction in marine layer coverage and an increase in temperatures over the next few days as high pressure off the coast moves a bit closer to California. Temperatures will warm 3-5 degrees today and Thursday with highs back in the 90's in the valleys to close out the work week. Winds are expected to be light, except for afternoon breezes of 10-20 mph along the central coast this afternoon. Isolated wet thunderstorms will be possible in the Sierras each afternoon with the best chance occurring today. Fewer storms are expected Thursday and Friday. The storms should remain above 9,000 feet and will dissipate quickly. Over the weekend, warmer temperatures may result in an increase of instability, resulting in an increase in wet thunderstorms in the Sierras. By Saturday and Sunday, scattered storms will be possible as far south as the Sequoia N.P. No storms are expected away from the Sierras throughout the extended period. Temperatures this weekend may climb into the mid and upper 90s in the valleys, but cooler weather may return early next week.
